

Soil Health and Small Grains Field Day

Join us for an in-field learning experience focused on soil health and small grains. This hands-on event is designed for conservation professionals in the morning, and farmers in the afternoon for those looking to expand their knowledge of assessing soil health, managing a third crop, and soil productivity principles. You are welcome to attend both sessions. Farmers will have discussions with experts in small grains, soil health, and more— with lunch included! Hear from local farmers including [Andy Linder](#), [Ed McNamara](#), [Mike Lindquist](#), and [Chuck Clanton](#)

What you'll learn

- **Soil health assessments**
 - Practical in-field tests you can do in your own field.
 - Activities led by Matt Lundberg (NRCS), Jodi DeJong Hughes (UMN Extension), Nic Jelinski (UMN), and Bailey Tangen (UMN Extension)
- **Integrating small grains**
 - Learn about managing small grains and soil health gains.
- **Tips for managing soil productivity**
 - Learn from local farmer experiences making the transition.
- **Cattle integration**
 - Learn about getting cattle back onto the land
- **Cost share programs**
 - Learn of programs to help offset cost of practices and equipment.
- **Crop diversification**
 - Alternative third crops to add profitability and productivity to your operation.
- **Local resources**
 - Learn of local organizations, professionals, and tools available as resources.
